**Emergency Overview:**

CAUTION! Anesthetic Agent. Overexposure by inhalation to the vapors may cause temporary nervous system depression with anesthetic effects such as dizziness, headache, confusion, incoordination, or loss of consciousness; they should be moved to an area of fresh air. Concentrations of anesthetic in the air would have to reach approximately 2-3 % before personnel would be expected to experience significant dizziness. Gross overexposure (> 20%) may possibly alter the heart's electrical activity with irregular pulse, palpitations, or inadequate circulation.

**Exposure Routes:**

Inhalation. Skin contact. Eye contact. Ingestion.

**Inhalation:**

Practically non-toxic by inhalation. Cardiovascular effects may include fluctuations in heart rate, changes in blood pressure, chest pain. Respiratory effects may include shortness of breath, bronchospasms, laryngospasms, and respiratory depression. Gastrointestinal effects may include nausea, upset stomach, loss of appetite. Nervous system effects may include ataxia, tremor, disturbance of speech, lethargy, headaches, dizziness, blurred vision.

**Skin Contact:**

May cause skin irritation.

**Eye Contact:**

May cause eye irritation.

**Ingestion:** Practically non-toxic if swallowed. No specific hazards other than therapeutic effects. See inhalation.

### 3) COMPOSITION/INFORMATION ON INGREDIENTS

<u>Component</u>	<u>Weight %</u>	<u>Classification</u>	<u>CAS #</u>
Sevoflurane	100	None	28523-86-6

### 4) FIRST AID MEASURES

**Inhalation:** If high concentrations are inhaled, immediately remove to fresh air. If not breathing, perform artificial respiration. Keep the affected person warm and at rest. Get medical attention as soon as possible

**Skin Contact:** In case of contact, remove contaminated clothing, and wash contaminated skin with soap and water. Seek medical attention if irritation is present.

**Eye Contact:** In case of contact, immediately wash (irrigate) the eyes with large amounts of tepid potable water, occasionally lifting the lower and upper lids. Get medical attention immediately.

**Ingestion:** Rinse mouth. DO NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities are swallowed, get medical attention immediately.

**Note to Physician:** Due to possible disturbances of cardiac rhythm, catecholamine drugs, such as epinephrine, should be considered only as a last resort in life-threatening emergencies.

### 5) FIRE FIGHTING MEASURES

**Flash Point:** Not determined

**Specific Methods:** No information available

**Flammable Limits in air-lower (%):** N/A

**Flammable Limits in air-upper (%):** N/A

**Auto ignition:** N/A

**Extinguishing Media:** Use extinguishing media appropriate to surrounding fire conditions

**Fire Fighting Instructions:** Fire fighters and others should wear NIOSH approved positive pressure self-contained breathing apparatus (SCBA) and turnout gear.

**Fire and Explosion Hazard:** Use water spray to cool containers. Containers may rupture under fire conditions.

### 6) ACCIDENTAL RELEASE MEASURES

**In Case of Spill or Leak:** Small volumes of liquid anesthetic agents may readily evaporate at room temperatures and may dissipate before any clean up attempts are initiated. For large spills, provide adequate ventilation or evacuate area. Large quantities of anesthetic agents may cause sedative effects. Restrict personnel not donning protective equipment from areas of spills or leaks until clean-up is complete. A sorbent designed for organic chemicals should be used for large spills. Spill pillows, vermiculite, and carbon-based sorbents are examples of suitable materials. Dike spill and prevent liquid from entering sewers,

waterways or low areas. Sweep or scoop up and remove to a suitable container. Close container and dispose of container in accordance with federal, state, and local regulations.

PPE (Inhalation): Depending on effectiveness of local ventilation, an air purifying respirator with organic vapor cartridge can be used to protect against vapors

## 7) HANDLING AND STORAGE

- Handling:** Wash thoroughly after handling.
- Storage:** Keep container tightly sealed. Store in a dry, cool, and well ventilated place. Store between 15-30 deg C (59-86 deg F).

## 8) EXPOSURE CONTROLS/PERSONAL PROTECTION

- Engineering Controls:** Investigate engineering techniques, process enclosures or local exhaust Ventilation to keep airborne levels below recommended exposure limits.
- Eye Protection:** Safety glasses, chemical splash goggles, face shield, or other full faced protection should be available for use if potential exists for exposure to splashes.
- Skin Protection:** Chemical resistant, impervious gloves should be used to avoid prolonged or repeated exposure. Wear a work uniform or laboratory coat. Additional body garments should be used based upon the tasks being performed.
- Respiratory Protection:** When working with small quantities in a well ventilated area, respiratory protection may not be required. If exposure levels exceed regulatory limits, implement a respiratory protection program that is in compliance with OSHA 29 CFR1910.134 or equivalent in other regions. Fire fighting requires the use of a self-contained breathing apparatus with full face piece and positive pressure mode.
